## 1. Basic Information:

<b>Course Name</b>	Database system 1
<b>Course Code</b>	BDB501
<b>Number of Presentational Sessions*</b>	2×8
<b>Number of Synchronous Sessions**</b>	8
<b>Number of Shorter Tests***</b>	2
<b>Number of Exams***</b>	1
<b>Theoretical Sessions Work Load (hrs.)</b>	48
<b>Practical Sessions Work Load (hrs.)</b>	24
<b>Credit Hours</b>	4

\*Each presentational session comprises both recorded lecture (1.5 hrs.) and interactive learning content (1.5 hrs.).

\*\*Each synchronous session comprises the interactive lecture carried out in real time in a virtual class (1.5 hrs.).

\*\*\*Each shorter test is 0.5 hr. long. The final exam is 2 hrs. long.

N.B.

Generally, each chapter requires two presentational sessions: one for the recorded content and one for the interactive content (unless the chapter is too long, in which case it may require more sessions).

This note applies to synchronous sessions as well, where each chapter requires one synchronous session generally.

## 2. Prerequisites courses:

Course	Code
Data structures & Algorithms 1*	BDA501

\*Should be studied in parallel with Database System lab (1) BDBL501

### 3. Course Objectives:

“Database system 1” aims to acquaint the student with the basic concepts of analysis, design, creating Entity Relationship Diagram (ERD), using database management systems and SQL language, and implementing database system.

In particular, the student will be able to:

1. Understand the basic concepts of analysis and design databases.
2. Understand how to design ERD diagrams.
3. The use of relations of relational algebra.
4. Using SQL language.
5. Use of XML databases.
6. Be familiar with the languages used in database management systems.
7. Join databases with programming languages.

#### 4. Learning Outcomes (LO):

By the end of this course, the learner is expected to:

- Analyze the data and data organization needs of organizations.
- Apply the Entity–Relationship (E–R) Model for building information systems' data models.
- Transform an E–R diagram into a relational model.
- Use normalization to create a database relational schema free of redundant data.
- Be capable of using SQL language instructions.
- Discuss the physical database design process of producing an efficient and tuned database.
- Understand the basic concepts of using databases through the internet.

\*The final exam is two hours long and is given at the end of the course.

\*\*Shorter tests are about 30 minutes long and are given after three or four lectures throughout the semester during synchronous sessions.

\*\*\*Presentations, interviews, and reports are submitted once after each three or four lectures throughout the semester during synchronous sessions.
